After the customer registration has been successful, the customer will be sent the **FX/CFD** account login details by emails. The **FX/CFD** account login details can be found also inside the customer's My Page.

After log in Mypage, you can see the WebTrader login on the left hand side:

On the top left corner of page, you will choose an account to trade in WebTrader. Please choose the account ending by number “1” to trade MT4 FX account.

One of the advantages of WebTrader account is that you do not have to open it separately. All you need to do is to open live/demo account with us and you can access the WebTrader platform.

II) HOW TO USE THE WEBTRADER PLATFORM:

After Clicking on the link, you can access Webtrader, the View will look like this:

There are 3 main parts of the WebTrader platform:

The left hand side: Where the currency pairs are displayed:

In the middle, you can work with chart section.

At the bottom right, all your trading history and transactions are displayed.

Copy Orders Positions Orders History

ID	Time	Symbol	Lot	Type	Price	T/P	SL	Swap	Fee	Pips	PL	Close
602262	03/24/2013 01:54	AUDUSD	1.00	Sell	1.05598	-	-	0.00	0.00	-8.7	-8.70	1.05685
Total Unrealized Profit: -8.70 USD												

1. Working with Charts

When working with charts in WebTraderr Platform, you should see them displayed upon launching the platform. If your charts happen to disappear, you can get them back by left clicking in the chart signal, appeared as below:

x2 Order Panel

#GB100H3

Sell Limit 1.00 Lot Buy Limit

10.0

Sell 6371.5 ↓ ↓ 6372.5 Buy

AUDCAD

Sell Limit 1.00 Lot Buy Limit

1.0

Sell 1.0497 ↑ → 1.0498 Buy

After clicking in the symbol above, the chart will appear below, in the middle screen:

Line Chart

Line charts display the chart as a broken line connecting close prices of bars, i.e. the bid of the last quote for this period. Traders often use this type of chart when working with short time periods (up to 5 minutes).

Bar Chart

Bar charts are displayed as a sequence of bars showing opening prices (the external left-side line) at the same time as closing prices (the external right-side line). A bar chart also shows the highs (indicating the highest price bid) and lows (indicating the lowest traded price). Traders often use this type of chart when working with time periods greater than 5 minutes.

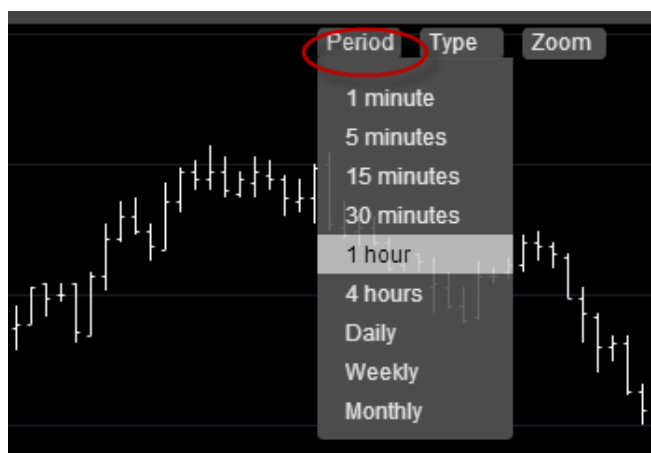

Candlesticks

Candlestick charts are display the same information as bar charts in another format. Traders often use this type of chart when working with time daily periods.

The difference between bar charts and candlestick charts is that the block in the middle represents the difference between the opening and closing prices. Most often, when the block in the middle is solid, then the currency closed lower than it opened.

Chart period

Directly above your chart you can select your trading time frame within the **Period** toolbar. The options provided to you are 1 minute, 5 minutes, 15 minutes, 30 minutes, 1 hour, 4 hours, daily, weekly and monthly.

By left clicking on any currency chart, a context menu is produced. Here you can access chart settings and specify your trading time frame within the **Period** option. Choose **Refresh** if an error occurs or if there are "gaps" on the chart.

Zoom helps to modify chart properties. You can also use the buttons on the **Charts** toolbar.

2. How to view the Market rate:

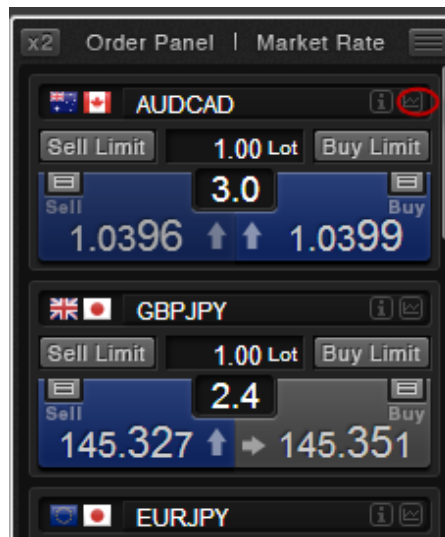

Look for the small window **Market Rate** in your WebTrader. You can find it in your left-hand side of your screen

- After click to the symbol, the market rate table will appear as:

Pair	Bid	SP	Ask	
EURUSD	1.34703	0.2	1.34705	
EURGBP	0.85736	0.2	0.85738	
EURCAD	1.3416	1.0	1.3417	
#GB100H3	6239.5	5.0	6240.0	
CADCHF	0.9166	2.0	0.9168	
USDCAD	0.99586	0.5	0.99591	
GBPCHF	1.4343	2.0	1.4345	
GBPAUD	1.5212	0.0	1.5212	
#ITA40H3	16795.0	5.0	16800.0	
AUDNZD	1.2356	3.0	1.2359	
GBPJPY	146.993	0.6	146.999	

- To display the chart, showing the bid of the instrument, you can get them back by left clicking in the chart signal, appeared as below:

3. How to place an order for a selected instrument:

- Left-click on the instrument you wish to place an order for in the **Market Watch** window and select the signal below **Sell Limit** or **Buy Limit**

- Now the order window will appear. It should look like this, depending on which type of account you have or order type you selected.

- To see your current position and close a position:

In this platform, all positions, orders and history will be displayed:

ID	Time	Symbol	Lot	Type	Price	T/P	SL	Swap	Fee	Pips	PL	Close
120817	02/02/2013 02:45	AUDCAD	0.01	Sell	1.0398	-	-	0.00	0.00	10.0	1.00	1.0388
120183	02/01/2013 01:27	EURUSD	0.05	Sell	1.35811	-	-	-0.01	0.00	-82.1	-41.05	1.36632

Total Unrealized Profit: -40.05 USD

- To use **Stop Loss**, **Take Profit** functions:

Stop Loss: an exit point for an opened position where the price less profitable for the customer than it was at the time of placing the order.

Take Profit: an exit point for an opened position where there is more profitable for the customer than it was at the time of placing the order.

By setting **Stop Loss** and **Take Profit**, you can limit the amount of time you spend waiting for an outcome. Orders will be executed automatically as soon as the price reaches order level (see below). You can place **Stop Loss** and **Take Profit** at the time of making a deal by completing in the **Stop Loss** and **Take Profit** fields in the **Order** window. If stop loss and take profit levels are too close to the current price, the **Modify** button will be locked. It is necessary to shift levels from the current price and re-request for position modifying. Values in the fields of **S/L** and **T/P** will be changed in the opened position status bar in the Terminal - Trade tab.

The limits for the minimum range between the order and the current price are defined in the Contracts Specifications.

In order to delete **Stop Loss** or **Take Profit** orders, specify its level as equal to zero. **Stop Loss** and **Take Profit** orders are executed in the following cases:

- The **Take Profit** order on an open Buy position is executed if the Bid price in the quotes flow becomes equal or higher than the order level.
- The **Stop Loss** order on an open Buy position is executed if the Bid price in the quotes flow becomes equal or lower than the order level.
- The **Take Profit** order on an open Sell position is executed if the Ask price in the quotes flow becomes equal or lower than the order level.
- The **Stop Loss** order on an open Sell position is executed if the Ask price in the quotes flow becomes equal or higher than the order level.

The order will be executed if at least one quote in the quotes flow reaches the order level. Please note, that in WebTraderr, charts are created using Bid prices. So:

- Minimum Ask price is equal to the minimum bar price (Low) plus spread.
- Maximum Ask price is equal to the maximum bar price (High) plus spread.
- Minimum Bid price is equal to the minimum bar price (Low).
- Maximum Bid price is equal to the maximum bar price (High).

Important: If, under abnormal market conditions, the order level falls within the price gap, NatureForex has the right to execute the order at the Bid or Ask price (depending on order type) of the first obtainable after the gap quote.

4. Additional Functions of WebTraderr platform:

- Log in Mypage directly from the WebTraderr site:

Or in this way

- View your Equity and Directly Deposit/Withdraw:

- View Full screen:

- Change the Language:

.There are 3 languages available: English, Japanese and Vietnamese
